### 06 Industry and Services

Production, orders and turnover statistics of the secondary sector in the 4th quarter 2019

## Secondary sector shows positive growth rates again in 4th quarter 2019

**Secondary sector production rose by 1.3% in 4th quarter 2019 in comparison with the same quarter a year earlier. Turnover rose by 0.3%. This rise has continued without interruption since the 1st quarter 2017 but was slightly weaker in the reporting quarter. This is shown by provisional results from the Federal Statistical Office (FSO).**

In comparison with the previous year industrial production grew in October by 3.3%, in November by 2.7%, then fell in December (-1.1%). For the whole of 4th quarter 2019 production increased by 1.6% in comparison with the same quarter a year earlier.

Construction production declined by 0.1% in 4th quarter 2019 in comparison with the same quarter a year earlier. Production declined by 1.2% in building, civil engineering in contrast registered an increase (+3.9%). Specialised construction activities recorded no growth in production.

### Turnover

Industrial turnover in October rose by 1.9% in comparison with the previous year, and in November (+1.3%) and fell in December (-2.3%). For the whole of 4th quarter 2019 in comparison with the same quarter a year earlier, turnover registered an increase of 0.3%.

Construction turnover rose by 0.2% in 4th quarter 2019 in comparison with the same quarter a year earlier. Turnover fell by 0.1% in building, civil engineering registered an increase of 4.5%, specialised construction activities a decline of 0.1%.

## Methodological notice

The **Industry Production, Orders and Turnover Statistics (INDPAU)** is a quarterly survey. The random sample comprises some 4500 companies.

The Swiss Federal Office for Energy (SFOE), the Swiss organization responsible for the compulsory stockpiling of oil products (CARBURA) and the Swiss Association of Gas Industry (VSG) serve as secondary sources for the statistical survey. This collaboration avoids certain economic activities having to be surveyed twice.

Among the variables surveyed are the monthly turnover figures and the quarterly orders received and on hand. The three variables are broken down by economic activity. A distinction is made by provenance (domestic/foreign) for the turnover and orders received variables. The economic activities' production is calculated by deflating turnover by production prices.

The **Construction Production, Orders and Turnover Statistics (BAPAU)** represent the economic development of the construction industry. The random sample is composed of roughly 3800 companies.

The Swiss Contractors' Association (SBV) conducts its own statistical survey among its members (approximately 1800 enterprises), data from which is used by the Federal Statistical Office (FSO) for the Construction Industry Production, Orders and Turnover Statistics. This coordinated approach makes it possible to avoid double surveys and eases the burden on enterprises.

Among the variables surveyed are the quarterly turnover figures, orders received and on hand. The three variables are broken down by economic activity. The economic activities' production is calculated by deflating turnover by production prices.

Both statistics are based on the General Classification of Economic Activities (NOGA) from the year 2008, which meets international standards and classifies businesses into different economic activities based on their economic activities.

In order to exclude seasonal fluctuations from the time series, data is seasonally adjusted. This is done using the X-12-ARIMA method which recalculates the entire time series every quarter. All time series will be adjusted for the number of working days (not every quarter has the same number of working days).

The results of the secondary sector (INDPAU and BAPAU) are available at: [www.statistics.admin.ch](http://www.statistics.admin.ch) > [Look for statistics](#) > [Industry and services](#) > [Production, Orders, Turnover](#) > [Secondary sector](#)
