

# Funding and performing of R&D in Switzerland by sector of activity, 2017

The image shows all cross-sector flows which prove to be very unequal. The funding of the performance of Swiss R&D is shown in the section above the broken line and the «Swiss-abroad» flows can be found below this same line. Private economy expenditure on R&D performed in Swiss controlled affiliates abroad (CHF 15 billion) is not mentioned in the diagram.

The left column shows sources of R&D funding. The right column lists the four places of R&D performance in Switzerland and one place of performance abroad.
